

### **What is a Yahoo! Widget?**

A Yahoo! Widget is a small, specialized desktop application that provides easy access to repeatedly used functions or frequently accessed information, such as weather forecasts, news stories or in the case of our Widget mortgage rates. Once installed, the Widget keeps itself updated with the most current information available automatically.

Our Widget will display the latest mortgage rates and fees we offer personalized to meet your requirements. You won't have to come to our website to get a rate quote – the Widget brings the rate quote to you!

### **How can I add your Yahoo! Widget for Mortgage Rates to my computer?**

Widgets require the Yahoo! Widget Engine, which can be downloaded at <http://www.cucmortgage.com/assets/2009/4/10/widgetus.exe>. If you don't have the Widget engine yet, install it now.

After you have installed the Widget Engine, [right click here](#) and choose "Save Target As . . ." or "Save Link As . ." from the menu that appears. When the Save window opens choose the My Documents/My Widgets directory and click "OK".

### **How do I set up the Mortgage Rates Widget to provide me with personalized rate information?**

Once you've downloaded the Widget and it's running on your Desktop, you can modify the rates that are displayed so that they match your exact criteria. To do that, click on the green triangle in the upper right-hand corner. The criteria screen will appear. Answer all the questions, and click "Go". The Widget will update the rates displayed and will use the answers you provided to update the rate information every hour!
